

# INSTRUCTIONS FOR CONTRIBUTORS

## Eligibility

Indiana Academy of Science members in good standing are eligible to submit papers for publication in the *Proceedings*. When a paper is signed by more than one author, at least one must be a member of the Academy. Preferably, **eligibility should be established before submitting the paper**, as such papers are given priority. In any case, all authors must be certified by the treasurer for payment of dues and old reprint bills at the time of the deadline (see below). Invited papers may be considered for publication regardless of the membership status of the author. If authors are unable to attend the fall meetings, papers read by title by the Divisional Chairman may also be considered for publication.

All papers submitted for publication in full will be reviewed by qualified reviewers selected by the Publications Committee. The acceptance of papers for the *Proceedings* is the responsibility of the Publications Committee. Among papers of primarily regional interest, *e.g.*, certain aspects of botany, zoology, geology, geography, and anthropology, those dealing with Indiana material will be accorded preference.

## Abstracts

Three copies of an abstract should be submitted to the Divisional Chairman at the time the title of a paper is submitted for the Fall program. All abstracts are acceptable for publication in the *Proceedings*, either separately or with papers that are published in full. Two copies of the abstract should be marked "for the editor." The third copy of the abstract should be marked "for the divisional chairman." and may include information about time, projection facilities needed, etc. **The abstract should be prepared according to the form currently used in the *Proceedings*** (see the latest copy of the *Proceedings*). The abstract should be complete, clear in itself and not over 5% of the length of the paper. Normally abstracts should not exceed 200 words in length. Abstracts and notes are not reprinted (except for those which are included at the head of a paper published in full).

## Deadline at the Editorial Office

When sent via the Divisional Chairman as prescribed, or directly, all material to be considered for publication in the *Proceedings* must reach the editor **within 20 days** following the Fall Meeting. This deadline is necessary to insure that the publication process remains on schedule.

## Preparation of Manuscripts

- A. Refer to the latest copy of the *Proceedings* for the accepted style of abstracts and papers, and follow this, especially in literature citations, headings, footnotes, table and figure construction.
- B. Type on 11 x 8½-inch bond paper with a new ribbon, leaving some margin. **Double space everything**, including title, author's name, department and institution, footnotes, quotations, legends and literature list. **Manuscripts must be submitted in duplicate**. The original will become the printer's copy; if it must be retyped, it will be sent back to the author for this.
- C. Footnotes are to be kept to a minimum. Necessary footnotes are numbered consecutively throughout, and referred to in the text as **superscripts, without parentheses**.
- D. Literature citations are listed **alphabetically** at the end of the paper, headed **Literature Cited**. List complete literature citations, *i.e.*, **author, date, title, journal, (or publisher, and city), volume and total pages**. The highly abbreviated form used in some journals **has not** been adopted for the *Proceedings*. Follow these models:
  7. Doe, J. B., and R. C. Roe. 1949. New light from old radioactive carbon. *J. Amer. Biol. Soc.* 34:278-305.

8. Milazzo, G. 1963. *Electrochemistry*. Elsevier Publ. Co., New York, N. Y. 708 p. **References cited should be numbered consecutively** (in the alphabetized list) and should be referred to in the text by number in parentheses on the line of type and before the period if at the end of a sentence.

- E. **Do not underline anything except scientific names, words to be italicized, and titles of books when they appear in the text only, not in literature list.**
- F. All literature listed, tables and illustrations, must be referred to in the text.
- G. Tables, which are costly to print, should be reduced to a minimum. Avoid small tables, scattered through the text. Each table (including heading) shall be typed on a separate letter-sized sheet and placed at the end of the paper. Outsize tables cannot be accepted.
- H. Photographs should be printed on glossy paper and have good contrast. It is best to mount them trimmed to fit tightly together at the edges in groups, on stiff cardboard with rubber cement. Proportion the group for a full page of the *Proceedings*, or use the full width of the paper ( $4\frac{1}{4}$ " ) and any part of the page's height. Do not mix line drawings and photographs in the same group. All figure captions should be on a single letter-size sheet, numbered to correspond and placed at end of paper.
- I. **The original for line drawings need be no more than twice the size desired for the printed figure.** They should be proportioned and arranged to fit the page size of the *Proceedings*. All line drawings must be drawn in India ink, lettered with a lettering set, and of suitable size to allow for necessary reduction. Do not submit printed maps when the necessary reduction will efface the narrower lines or render some of the lettering hardly legible; such maps should be redrawn and lettered in adequate size letters, omitting unnecessary details. All illustrations requiring a size scale must portray the scale in a manner that permits size reduction. **Illustrations must be kept to a minimum.**
- J. **Major professors are urged to review all papers by their graduate students**, for both form and content, before they are sent in for publication. Of those based on university theses, manuscripts carrying the approval by the professor will be given preference over those without such approval. New authors, especially, are reminded that a scientific paper should summarize the work, not recapitulate it. It must be much more concise than a university thesis, avoiding all extraneous material especially long tables and lists of little interest except to the author. All manuscripts should be as concisely written as possible.
- K. **Reprints of papers are paid for by authors, at cost.** Directions for ordering reprints accompany the galley proof and the orders are placed at the time the author returns the corrected galley proof to the editor. The order forms supplied with the galley proof must be completed and returned to the editor along with any special institutional forms regarding payment for the reprints. Abstracts and notes are not reprinted.
- L. **The editor needs at the time he mails out galley, current addresses for all authors and co-authors of all abstracts and papers.** Many former graduate students lose the opportunity to order reprints when their forwarding addresses are faulty. It is suggested that the student's permanent home address be written on the reverse side of the abstract copy marked "for the editor."
- Revised July 31, 1974.
